

COS202 PRACTICAL ASSIGNMENT REPORT

Name: Ogidan Timilehin
Matric Number: 241206021
Department: Software Engineering
Course: COS202

Introduction

This report presents the development of a Mathematical Calculator and a Personal Pocket CGPA Calculator using Python.

Mathematical Calculator

Objective: Perform basic arithmetic operations (+, -, *, /, %, ^), clear input and exit.

Algorithm:

1. Start
2. Accept input
3. Select operation
4. Compute result
5. Display result
6. Exit

Sample Output:

$(12+8)*5 = 100$

$25\%4 = 1$

$2^6 = 64$

Personal Pocket CGPA Calculator

Objective: Compute CGPA from Total Grade Points and Total Credit Units and display degree classification.

Algorithm:

1. Start
2. Enter TGP
3. Enter TCU
4. $CGPA = TGP / TCU$

5. Display class

6. Exit

Sample Output:

TGP=148

TCU=40

CGPA=3.70

Class: Second Class Upper

Conclusion

The applications were successfully developed using Python.
